Minecraft Servers are generally run on either a physical server or a virtual private server (VPS). A physical server hosted by the user and rented from third-party

companies, ISPs, universities etc. or free services like NFOservers.com, Adverline.pl and VirtualRack.co.uk which are VPS's seems to be the most common way to host your Minecraft Server. A VPS or physical server is better for most, since it is more stable and customizable and can be set up to run on the same machine as the player's computer allowing for an instant jump in to a server when desired.",

How do I join my IP Address to a Minecraft Server? â€œ To connect to a Minecraft server, you will need an IP address or host name of the server. Connecting your Minecraft server via your IP address is the same as connecting to it directly through the internet without requiring any extra software. The primary way to get an IP address is by going into your internet browser's settings page and finding out what the current addresses given from your provider are for you. If you are using a Bukkit or Tekkit server, then this should be included with their connection instructions. With individual servers, there are a couple ways that you could go about getting this information. The first way would be to simply ask the host if you can connect to their IP address and they will give it to you. Otherwise, you can go through your router configuration page to find out the information that you need.",

Minecraft hack is a very helpful feature. This is because it increases the amount of health, food and resources available in game, just like cheats do for other games while playing on multiplayer servers. The things you can get are infinite. Basically, this means the developer of the program has put all the items into a chest or an inventory, and if you extract something from it, this will auto-generate it. However, there is a slight problem that sometimes things will appear in your inventory when they were not added to it by the developer of Minecraft hack.",
